Prompt for Multimodal Dialogue Annotation Task:

You are a linguist annotator working on multimodal dialogue data. Your task is to annotate the provided dialogues using the annotation scheme described below and two images which are attached to this prompt; image 1 is the Participant 1's view and image 2 is Participant 2's view. You provide the annotation in a table. The dialogue is grounded in a visual scene containing cups. Use both the visual information and the linguistic context when you are making the annotation for the scene and the dialogue.

The instructions for participants:

"You and your partner who is sitting at the other computer and are playing a game. The picture represents the scene that you are currently both in. Your partner is the person facing you at the opposite side of the table. In addition, there is also another person there, Katie, who is only watching the scene but is not taking part in the conversation.

There are objects on the table but some of them are hidden from you. Your partner can see these objects. The same is true for you: you can see the objects that are hidden for your partner. Katie can see all the objects.

Your task is to talk to your partner to find out where these missing objects are. Once you both have discovered all missing objects you can end the conversation by clicking on the **Finish**-button.

You can only talk to your partner by entering text in the chat window, make sure that the conversation is **related to the task**. Please **do not enter personal information** in the chat. As soon as the data collection is finished and the participation is accepted, we will anonymize the data. Therefore, it is **not possible to delete dialogues after finishing data collection**. This task should take approximately 45 minutes, you can just continue in case you need longer. After 60 minutes the session will automatically end."

Image 2: Participant 2's view:

Annotation Labels:
Your task is to identify the communicative function of each message and annotate each message as one row in the output table. The classification includes parts like: Dialogue ID, Participant, Turn, Messages, Utterances, Dialogue Act, Spatial, Relation Type, Topological, View Point, FoR, Explicit, and Comments. Each part needs to be in a different column. Provide the annotation in a table.

Dialogue ID is a field which all utterances that belong to the same interaction between participants.

Example: Dialogue ID 3

Participant identifies the speaker who produced the utterance (Participant 1 and Participant 2). This helps the dialogue to be analyzed based on speaker role and turn-taking.

Example:
Participant 1: “Yeah maybe”
Participant 2: “I see two reds top right. And a red at the bottom left”

Turn represents a continuous segment of speech produced just by one participant before the other participant begins speaking. Each turn is assigned a unique identifier(participant) within the dialogue.

Example:
Turn 1: “What do you see?”
Turn 2: “different colored cups that sort of look like buckets. 2 people standing around a table with grass in the background”

Utterance is specified by each turn which is segmented into smaller units based on sentence or clause structure and they are named “**Messages**”.

Example:
Participant 1 / Turn 1 / Utterances: “What do you see?”
Participant 2 / Turn 14 / Utterances: “ok so we probably have different images”

Messages is specified to split each utterance to smaller segments. Messages are divided by a question mark, a comma, an exclamation point, and period. And also, they are divided by conjunctions such as “and”, “but”, “if”, “because” and adverbs like “then”.

Example 1:
Utterance: “There are like 6 white cups and 4 red and 3 blue and 2 yellow. Is that the same for you?”
Message a: “There are like 6 white cups and 4 red and 3 blue and 2 yellow.”
Message b: “Is that the same for you?”

Example 2:
Utterance: “So im the woman in gray and the white one is the npc from the description of the task.”
Message a: “So im the woman in gray”
Message b: “and the white one is the npc from the description of the task”

Dialogue Act describes the communicative function of each utterance or sentence. This field includes **inform**, **question**, **answer**, **request**, **instruct**, **offer**, **suggest**, **confirm**, **disconfirm**, **accept**, **decline**, **promise**, **agreement**, and **disagreement**. You are allowed to assign two functions if you recognize it. Each category is defined based on Longman dictionary as followed:

Inform: to officially tell someone about something or give them information.
Question: a sentence or phrase that is used to ask for information or to test someone’s knowledge.
Answer: to say something to someone as a reply when they have asked you a question, made a suggestion etc.
Request: to ask for something in a polite or formal way.
Instruct: to officially tell someone what to do and to teach someone something, or show them how to do something.
Offer: to ask someone if they would like to have something, or to hold something out to them so that they can take it or to provide something that people need or want.
Suggest: to tell someone your ideas about what they should do.
Confirm: to show that something is definitely true, especially by providing more proof.
Disconfirm: to prove a statement or theory false.
Accept: to decide to do what someone suggests or advises you should do, or to agree to take or deal with something that someone gives you, or to say that it is suitable or good enough. To agree that what someone says is right or true.
Decline: to say no politely when someone invites you somewhere, offers you something, or wants you to do something.
Promise: to tell someone you will definitely do, give, or not do something in the future.
Agreement: when people have the same opinion as each other.
Disagreement: a situation in which people express different opinions about something.

Example:
Participant 2: “2 people standing around a table with grass in the background” -> inform
Participant 2: “how many reds total did you have?” -> question
Participant 1: “four” -> answer
Participant 2: “what other languages do you speak by the way? if persian, feel free” -> request
Participant 2: “they just line up but at an angle” -> instruct
Participant 2: “maybe i have a white you cant see” -> offer
Participant 2: “it should be easy to figure out what is hidden…” -> suggest
Participant 1: “oh okay” -> confirm
Participant 1: “no they are blue, red and yellow, three closet cups to her” -> disconfirm
Participant 1: “me too” -> accept
Participant 1: “Yeah but I think they don't have it” -> decline
Participant 2: “ok” -> promise

Participant 1: “yes yes” -> agreement
Participant 1: “I don't think” -> disagreement

Spatial indicates whether the utterance contains information about spatial properties or objects within the visual scene. The Spatial is shown binary.

Example: “i see two reds top right” -> Spatial: 1
Example: “your red could be hidden to me” -> Spatial: 0

Relation Type describes the broad semantic type of spatial relation expressed in a dialogue utterance. If there is none, enter 0. Relation Type includes:

Projective: left of, right of, above, below, in front of, behind
Topological: in, inside, on, overlapping, touching, containing
Proximity (Distance): near, close to, far from, nearest
Directional: toward, away from, into, out of, across, along
Region: in the center, in the corner, at the edge, top row, bottom left
Between: between the two …
Alignment: in line with, aligned with
Containment: inside, within
Adjacency: next to, beside, adjacent to

Example: “i see two reds top right” -> Relation Type: Projective
Example: “2 people standing around a table with grass in the background” -> Relation Type: Region
Example: “theyre both near the center,” -> Relation Type: Proximity
Example: “but theyre just offset at an angle the further right they go” -> Relation Type: Directional
Example: “Hey” -> Relation Type: 0

Topological field describes how objects or regions are connected, touching, separated, or positioned relative to one another in terms of their spatial connectivity. Topological records the linguistic expression that conveys the perspective-independent spatial relation. If there is none, enter 0.

Example: “theyre both near the center,” -> Relation Type: Proximity / Topological: near.
Example: “What do you see?” -> Topological: 0

View-Point specifies the perspective from which the spatial description is interpreted. The reference frame may depend on the speaker’s viewpoint, the addressee’s viewpoint, Katie’s viewpoint, or the empty edge of the table in the visual scene. Use the following labels: **Speaker**, **Addressee**, **Katie**, and **External**. If there is none, enter 0.

Example: “I have one red buttom right and one red buttom left.” -> Speaker
Example: “do you have any cups near the top left?” -> Addressee

FoR (Frame of Reference) identifies the coordinate system used to interpret spatial expressions. It contains **Relative** and **Intrinsic**. In a **Relative Frame of Reference**, spatial relationships are described from the observer's perspective, whereas in an **Intrinsic Frame of Reference**, spatial relations are described based on the inherent orientation or feature of an object. If there is none, enter 0.

Example: "I have 2 red cups in front of me." FoR -> Relative: Speaker

Explicit indicates whether the spatial perspective or viewpoint used to interpret the spatial expression is explicitly stated in the utterance. (Explicit is the perspective explicitly mentioned by "From my perspective…", "From my point of view…", "From my side…") Record the exact perspective expression in the column and in the related row. If there is none, enter 0.

Example: "From my side 1st row …" Explicit: from my side

Comments field is used to record additional observations, or explanations related to annotation.

Example: Initial greeting to start the conversation (Hi)
Closing the dialogue (Bye)
Asking about the scene
Asking about the game
Message contains multiple objects
Expressing emotions

Rules:

1. Preserve the original message text.
2. Use the attached images to support your interpretation.
3. If an annotation is ambiguous, explain it briefly in Comments.

_____

Annotate this Conversation in a table for the parts: Dialogue Act, Spatial, Relation Type, Topological, View Point, FoR, Explicit, Comments. And produce the final annotation table.

Conversation 17:

Participant	Turn	Message	Utterances
1	1	1	Hey
2	2	2	Hey
1	3	3	What should we do now?
2	4	4	I assume we should just describe what we see first?
1	5	5	Okay, I see a table with a lot of big cups
2	6	6	I see a lot of different cups, 3 red, 3 blue, 2 yellow and 7 white
1	7(1)	7(1)	and two women standing around it
1	7(2)	7(2)	I see 8 white, two are doubles?
1	7(3)	7(3)	3 blue 3 red and 2 yellow

2	8	8	Yea two appear to be double without a handle
1	9	9	yes
2	10	10	Maybe buckets?
1	11(1)	11(1)	yeah could be
1	11(2)	11(2)	look like pots also lol
2	12(1)	12(1)	Could be
2	12(2)	12(2)	All the cups with visable handles, have white handles with a strap of their colour
1	13(1)	13(1)	yeah, except the two red ones in front
1	13(2)	13(2)	and the two yellow ones
2	14	14a	Red ones in front?
2	14	14b	I think our images have different rotations
1	15	15	oh maybe
2	16	16	I have one red in front and two in the back right corner
1	17	17	I have in the front row from left to right, red blue white red
2	18(1)	18(1)	Mine is yellow red white(bucket) white normal
2	18(2)	18(2)	Last row from left to right is white normal, blue, red
1	19(1)	19(1)a	uh huh,
1	19(1)	19(1)b	I'm confused,
1	19(1)	19(1)c	looks a bit different
1	19(2)	19(2)	so the two women
1	19(3)	19(3)	one have from left to right in front of them (their left) yellow red withe
2	20	20	I have one woman and one man
1	21(1)	21(1)	and one is red blue white bucket, yellow
1	21(2)	21(2)	ohhh okay
2	22(1)	22(1)a	Woman with white shirt?
2	22(1)	22(1)b	Has a yellow white and red mug infront of them?
2	22(2)	22(2)	They are standing on the right side of the image?
1	23	23a	I have one with grey standing opposite,
1	23	23b	and one with white shirt standing on the right of me
2	24	24a	So im the woman in gray
2	24	24b	and the white one is the npc from the description of the task
1	25(1)	25(1)	okay
1	25(2)	25(2)	so you have from your left, yellow red white?
1	25(3)	25(3)	and I have from my left, red blue white red
2	26(1)	26(1)a	I have yellow red white white,
2	26(1)	26(1)b	and you red blue white.
2	26(2)	26(2)	There is 3 red cups one in front of me and one in front of you with the last one behind the one in front of you
2	26(3)	26(3)	There are*
1	27(1)	27(1)a	it doesn't make sense lol,
1	27(1)	27(1)b	are our images different or is it supposed to be the same?
1	27(2)	27(2)a	I have 2 red cups in front of me,

1	27(2)	27(2)b	one far right and one far left
2	28	28	There was suppose to be some difference
1	29	29	okay
2	30(1)	30(1)a	I think we have the same amount of cups
2	30(1)	30(1)b	but they have slightly different positions
2	30(2)	30(2)	Cuz your far right is empty on my screen
1	31(1)	31(1)	hmm
1	31(2)	31(2)	damn we can't scroll up the chat lol
2	32	32	The first two rows on your side only has 3 cups each for me
1	33(1)	33(1)a	yeah yours is the same for me,
1	33(1)	33(1)b	you have two rows with three cups each
1	33(2)	33(2)	what was our end goal again?
2	34(1)	34(1)a	Is it last row is Kinda 3 cups towards your right side?
2	34(1)	34(1)b	Then 2nd to last more spaced out on the table?
2	34(2)	34(2)a	Find the difference,
2	34(2)	34(2)b	but im not sure how we really keep track
2	34(3)	34(3)a	They said the npc could see everything
2	34(3)	34(3)b	but idk how that would help us
1	35(1)	35(1)a	we can do this,
1	35(1)	35(1)b	describe every row and column from our perspective in one message
1	35(2)	35(2)a	okay from in front of me to the back, and from left to right, first row is red blue white,
1	35(2)	35(2)b	then there is second row one white bucket in the middle,
1	35(2)	35(2)c	then third row yellow red white blue, fourth blue white white bucket and last white red yellow,
1	35(2)	35(2)d	maybe we should try to draw each others on a paper or something
2	36	36a	From my side 1st row from left to right is: yellow, red, white(bucket), white.
2	36	36b	2nd row from left to right is white, white (bucket) white, blue, yellow.
2	36	36c	3rd row is blue, white, red last row is white blue red
1	37	37	I think the difference is just how one white and one white bucket are positioned
2	38	38a	Does the white mugs Kina form a y shape on the table?
2	38	38b	Except for one that is in my right side corner?
1	39(1)	39(1)	and one red is also different?
1	39(2)	39(2)a	yeah they kind of do,
1	39(2)	39(2)b	the tale of the y is kind of bent maybe?
2	40(1)	40(1)	Maybe, cuz the red ones closet to you are back to back
2	40(2)	40(2)	Yea so 5 of the wite mugs form a y shape
1	41	41	okay, now what, this is trippy lol
2	42	42a	If we go based on the white mugs forming a y shape
2	42	42b	the top part (v like) is closet to me
2	42	42c	and has a yellow and red mug in it.
2	42	42d	On the lower j part of the y there is a single blue mug on your right/my left.
2	42	42e	With two blue, two red and one yellow on your left/my right.
2	42	42f	With the last white cup in the corner closest to my right side.

2	42	42g	Is it the same for you?
1	43	43	yes
2	44	44a	So maybe our cups are the same
2	44	44b	its just the perspective that makes it weird?
1	45	45	maybe
2	46	46	Maybe its the handles?
1	47	47	but do I have a red mug on my far right from your perspective as well?
2	48(1)	48(1)	No
2	48(2)	48(2)	Only a blue
1	49	49	yeah the blue is right middle of the yable from my perspective
2	50	50a	Wait if its right from my perspective
2	50	50b	then you have one red in the corner.
2	50	50c	Was thinking right from your perspective
1	51	51	no I have one red on either of my sides, like one on each side
2	52(1)	52(1)a	That you dont,
2	52(1)	52(1)b	there are two reds in the same corner on your side and one in the middle of the table on my side
2	52(2)	52(2)	Its the corner on your left side
1	53	53a	I have like 4 reds in total,
1	53	53b	you have three or?
2	54	54	3
1	55	55	and I have two yellow
2	56	56	I have 2 yellow, 3 red, 3 blue, 6 white
1	57	57	I have one red extra then
2	58	58a	Okay, that is the difference
2	58	58b	they wanted us to find i think
1	59	59a	LOL, that's crazy,
1	59	59b	so everything else is the same?
2	60(1)	60(1)	I think so
2	60(2)	60(2)	We havent said anything else that stod out
1	61	61	but you have like four cups in front of you the closest ones right?
2	62(1)	62(1)	Yea Kinda yellow red, bucket and white are really close to me
2	62(2)	62(2)	You also has two buckets?
1	63(1)	63(1)	for me you are missing the bucket one right in front of you
1	63(2)	63(2)a	yeah I have two buckets also
1	63(2)	63(2)b	but I think one of them is in a differet place for either of us
2	64	64	You had 6 white?
1	65	65	yes
2	66	66	The buckets are on my first and 2nd row
1	67	67	for me one of the buckets is right between the two whites on the tale of the Y
2	68	68a	Yea that is my 2nd bucket
2	68	68b	the first one. Makes the top corner of the y.
2	68	68c	From your perspective it would be the top left corner

1	69	69a	yes, should be,
1	69	69b	the one closest to you right?
2	70	70	Yes
1	71	71a	okay I think that's the two differences,
1	71	71b	one bucket is out of place and one extra red?
2	72(1)	72(1)	Seems like it
2	72(2)	72(2)a	That is probably why the had two buckets.
2	72(2)	72(2)b	So we could notice them.
1	73	73	okay
2	74	74	Should we end?
1	75	75	yeah I think
2	76	76	Okay bye
